What I claim as my invention is:

1. A bow, card, packaging device, shipping or packing bow/card, ornament, invitation, party favor, novelty item, toy, craft item, piece of fine art, brochure or promotional item, etc., comprising of:

A planar sheet of paper or other foldable/bendable surfaces, which has an interior basic shape or central region with side edges; fold lines, perforations, scoring and/or enclosed instructions are the demarcation of the side edges; from the side edges of the basic shape or central region extend panels of same or different material; some or all panels fold in towards the central region; when the panels are combined or assembled together a caricature, plant, human, theme, shape, object, etc. is formed; one, few or all sides of the panels may contribute to the formation of the shape.

a single sheet of paper or foldable/bendable material, which is cut and scored with each panel of paper ready to fold, or already folded to form the unified caricature, plant, human, theme, shape, object, etc

when the device is folded and flipped over to the reverse side, the interior central region is apparent
